DOUBLE POCKET VANE MIST ELIMINATORS

PRODUCT BULLETIN – VNM-DP

Twice the Separation Capacity and Higher Efficiency Than Standard Vane

Offshore platform separators in the Gulf of Mexico, Lake Maracaibo (Venezuela) and the Java Sea (Indonesia) have utilized Filters’ Double Pocket Vanes to increase their gas production. The vane’s unique geometry channels the collected liquid away from the gas, minimizing reentrainment. The blade geometry also allows far more efficient mist removal. New vessels can be designed much smaller saving cost and weight.

BENEFITS

- Increase capacity up to 100%
- Reduce vessel size and weight
- Increased efficiency
- Maintains efficiency at higher pressures
- Debottleneck existing equipment

Filters® manufactures a full line of tower internals, mist eliminators and other components critical to effective mass transfer and separation. For more details regarding these products, visit our website or consult with a Filters Separations representative.
